REMOTE DISPLAY
(24V AC/DC)

| OVERVIEW |

The remote display allows the main controller to be mounted inside the monitored area without the need to enter to view the system status, or can be used to provide an indication at additional exits. This can be used with the GasMonitor or BoilerGuard only.

A traffic light LCD will advise if any of the connected sensors enter alarm and the display can either scroll through the concentration of all sensor types connected or simply display the status.

Dimensions

	Standard	IP Rated
Height	125mm	152mm
Width	86mm	110mm
Depth	36mm	50mm

Technical Specification

Power Supply	24V AC/DC ± 10%
Power Consumption	40mA Max
VFC Output	SPDT - 1A @ 24V Max
IP Rating	IP40 / IP66
Approval	CE, UKCA

Key Features

- Powered directly from panel
- Up to 4 displays can be connected
- Wired on the same network as the sensors
- Bold traffic light indication

Part Numbers & Options/Accessories

Part No	Description
GM-RD	GasMonitor Remote Display
GM-RD-IP66	GasMonitor Remote Display (IP66)
